

Rotating machinery and associated equipment maintenance

Weir Oil and Gas is a leading provider of equipment maintenance, process support and asset management in a wide range of industrial processes.

We have the comprehensive skill set to meet a broad range of customer and process demands. We provide maintenance and service of rotating plant and associated equipment of our own products and all other major brands.

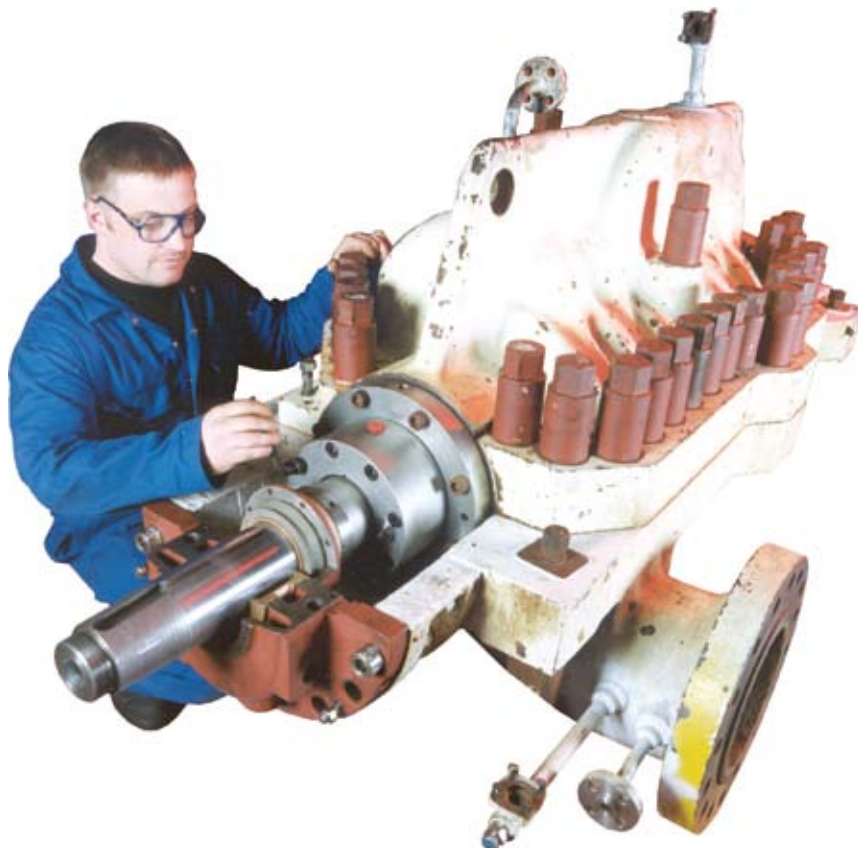

Optimum maintenance ensures operating efficiency is improved

Condition monitoring is used to identify areas for improvement

Re-engineering of parts to reduce cost and delivery times

Our widespread network of service centres are well equipped and staffed by trained engineers and technicians to support a field service operation, providing on-site back-up.

Our services cover:

- Centrifugal pumps, multi-stage/multi-phase
- Steam turbines & generators
- Centrifugal & reciprocating compressors
- Valves - steam, gate, ball and sulphur
- Fans and blowers
- Gearboxes
- Re-engineered parts
- Protective coatings
- Centrifuges
- Crushers

Project management, process engineering and product upgrade

Pump cartridge being rebuilt after overhaul

Routine inspection of main boiler feed pumps in a power station

Our service centre network is supported by design and engineering teams delivering a **project management** and **process engineering capability** and a **product upgrade** capability to extend repair cycles, raise operating efficiency and reduce life costs.

We provide a 24 hours a day, 7 days a week service to many key industries:

- Oil & gas
- Mining and minerals
- Food processing
- Pulp and paper
- Petrochemical
- Power generation
- Oil sands
- General industries

As specialist of repairs to centrifugal pumps and high speed rotating machinery we can deploy a range of diagnostic, technical services to help our customers identify opportunities for process improvements, increased up time and equipment operating efficiency.

Service centre support services

- Condition monitoring
- Hydraulic and mechanical design
- Materials and design upgrades
- Inventory management
- Installation and commissioning
- Tracking and analysis software

Improved plant performance reduces operating costs

Installation & commissioning through to full site operation
