

Advanced Parts Solutions

Weir ADVANCED PARTS SOLUTIONS is a complete manufacturing facility supplying engineered parts, material upgrades and redesign of components.

With over 100 years of pump manufacturing experience, Weir ADVANCED PARTS SOLUTIONS provides a high quality spare parts service that will reduce costs through the life of your rotating equipment.

Our ultra-modern manufacturing facilities located throughout the world produce high integrity spare parts for all rotating equipment irrespective of manufacturer or location.

Our technicians will visit your site to survey, digitally capture component geometry and record stock spare parts prior to preparing manufacturing drawings all at no cost. Where appropriate we can extend this service to a wider analysis of plant operating problems encompassing operating conditions, material selection, design and production parameters.

Engineering:

At Weir APS we pride ourselves in rapid production of current or obsolete components with an accuracy and quality that meets or surpasses competitors' products.

We have full design and engineering capabilities including mechanical and hydraulic modifications. Additionally Weir can manufacture all the internal components required for compressor and steam turbine re-rates. This includes impellers, shafts and stationary components such as diffusers and return channels.

Our extensive experience in re-engineering aligned with over 100 years of experience in the design of similar products ensures that all critical fits and tolerances are reproduced to guarantee reliable operation.

Benefits:

Cost competitive engineered components available on short lead times

Full technical support and design and R&D support from Weir Group

Material upgrades can be offered competitively priced against original material selection

Engineering solutions can be offered to enhance efficiency, improve performance and extend the life of equipment

Design of spare parts

Rapid prototype of rotating assembly

Finished casting

Faro arm CMM equipment

Rapid Prototype Printer
