

Flow Line Safety Clamps

Excellent
Oil & Gas
Solutions

Weir SPM's Flow Line Safety Clamps provide increased protection from flow line ruptures in non-energized fluid operations.

Increase safety on-site by reducing excess damage and risk of injury due to flow line ruptures with Weir SPM's Flow Line Safety Clamp system.

Weir SPM offers a convenient way to increase safety on site with the added benefit of easy installation. Flow Line Safety Clamps are intended to restrain flow line piping in the instance of rupture or excessive pulsation during pumping procedures.

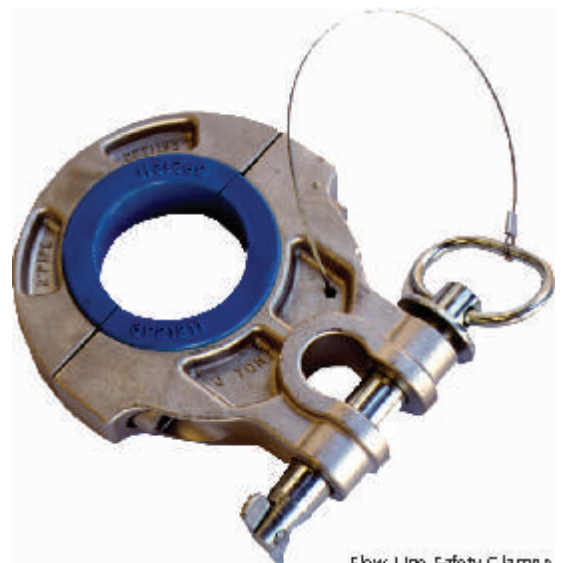

Safety Clamps should be installed on either side of potential failure points. The area for potential danger is greatly reduced with the use of this system.

Though the Flow Line Safety Clamps are field-proven durable products, Weir SPM does not recommend the use of this product on energized fluid flow lines. For such instances, Weir SPM offers the Flow Line Safety Restraint System, the ultimate tool to help eliminate injury, death, and costly damage to equipment during a high-pressure flow line failure.

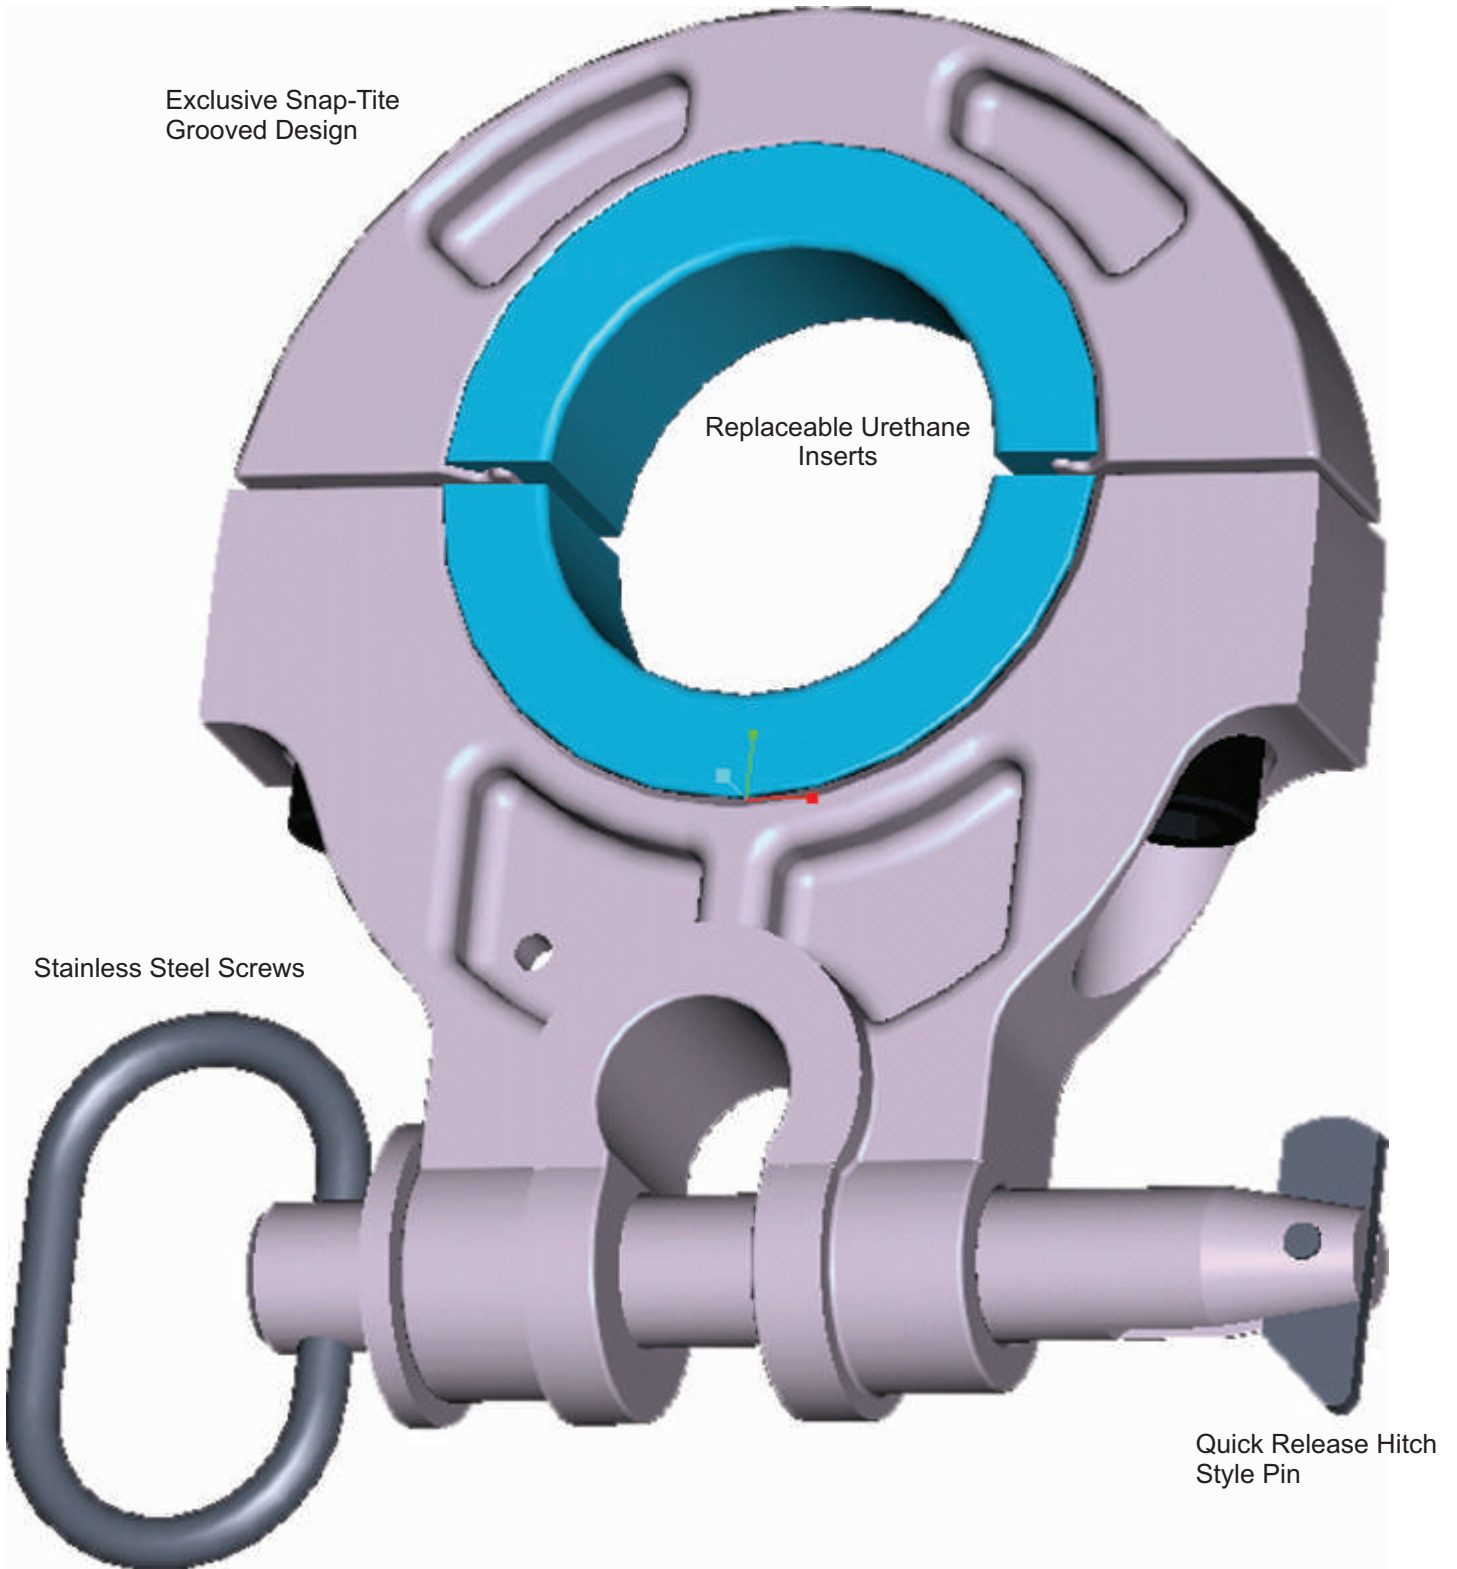

U.S. Patent No. 5,689,862

Product Features:

- Rust resistant nickel-plated steel construction.
- Lightweight, ribbed design.
- Quick release pin to secure safety cable dramatically reduces installation time.
- Sizes available for 2", 3", and 4" piping and 2", 3" and 4" swivels.
- Interchangeable parts enable fast, simple field installations.
- Stainless steel screws for easy trouble-free maintenance.
- Excellent, inexpensive way to add safety to flow piping systems.
- Long-lasting replaceable urethane inserts.

Flow Line Safety Clamps feature replaceable urethane inserts, and are constructed from high strength steel to increase durability and performance.

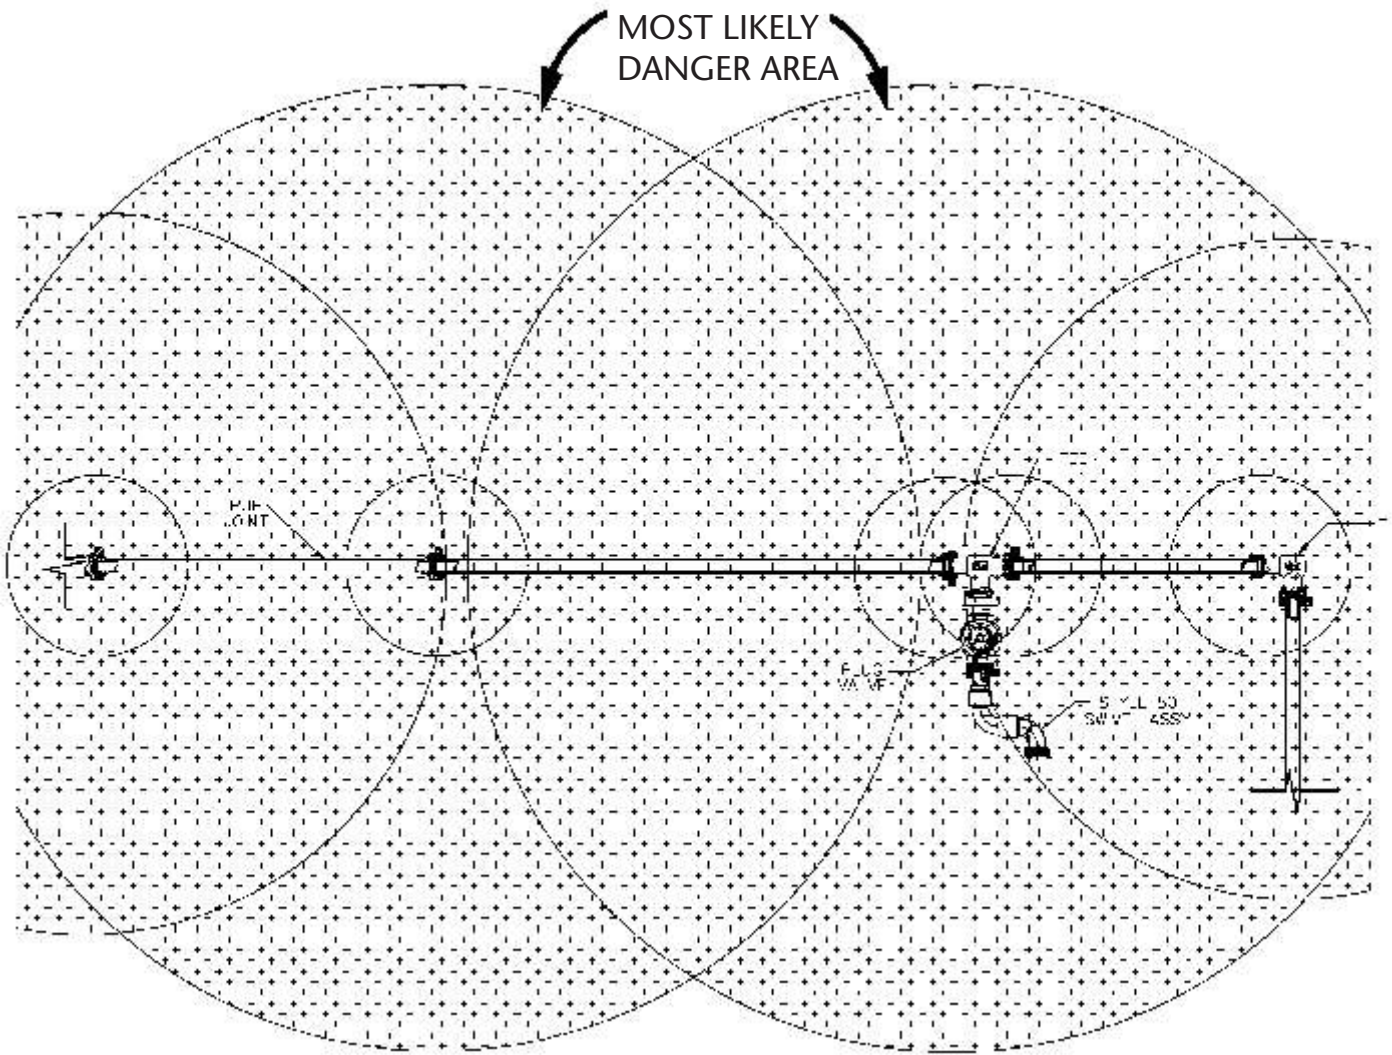

Clamp Ratings:

- 4 Ton Safe Working Load (S.W.L.)
- 6 Ton Pull Test Load
- Ultimate Load = 5 x S.W.L.

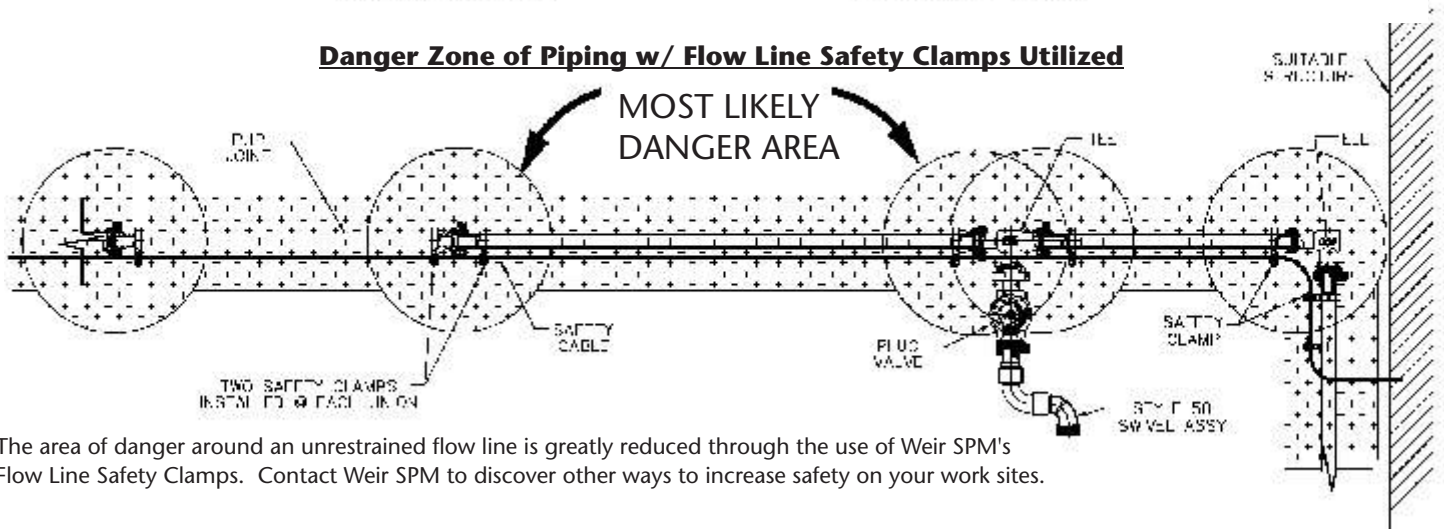

Safety Cable Specs:

- Min. 5/8" Diameter Wire Rope
- 4 Ton Safe Working Load (S.W.L.)

Danger Zone of Typical Unsecured Piping

Danger Zone of Piping w/ Flow Line Safety Clamps Utilized

The area of danger around an unrestrained flow line is greatly reduced through the use of Weir SPM's Flow Line Safety Clamps. Contact Weir SPM to discover other ways to increase safety on your work sites.
