OIL & GAS

Local service, global support

Weir Oil & Gas's newest local service center

Weir Oil & Gas is a leading supplier of high-quality, value-added engineering solutions. Solutions focused on extending the life cycle and enhancing performance of complex rotating equipment. With an extensive network of six service centers across North America, we can draw on the global technical resources of The Weir Group to support in-house or on-site projects. The Weir Group is the fourth largest pump manufacturer in the world, established in 1871, with just under 8,000 employees world wide.

What Weir Oil & Gas can do for you

We offer a full range of services under one roof, to get your pump back in 'as new' condition on time, and quality assured. Our input of experience and know-how will result in improved performance and longer life.

As well as repair, refurbish and rebuild, we can provide input for material upgrades or refinements to design features. Whether you are changing your system operating point or re-rating for new requirements.

Working together our design teams can propose upgrades to increase capacity or improve overall performance. These services cover material upgrades through to new hydraulic designs to provide a greater head or flow from the same casing arrangement.

Full range of services

- Technical and practical know-how on pumps and systems
- Complete machining and assembly facilities
- Precision manufacture of parts
- Computerised dynamic balancing
- Compliance with industry standards when required (API and HI)
- Hydrostatic testing
- Field start up and supervision
