

Weir SPM Product Update

5/21/2009

Offshore Iron “Baskets”

Weir SPM has developed and now offers convenient, engineered iron “baskets” utilized in the transfer of high pressure iron onto offshore platforms.

Background:

With a growing demand for stimulation and well service activity in the world’s premier offshore markets, a top customer turned to Weir SPM to develop custom high pressure iron containers, or “baskets”, to allow for the safe and convenient loading of iron from a transport vessel to an offshore platform. These “baskets” are required to meet specific industry accepted guidelines for offshore applications, yet still be flexible to meet customer needs with rugged construction for extended life.

Solution:

Weir SPM is developing a series of custom designed offshore “baskets” to meet the customer’s need for transporting their equipment. These “baskets” are now available for all customers, stocked with high-quality Weir SPM high pressure flow line product. Weir SPM meets customers’ design requirements for specific lifting specification as well as flexible mounting points and easy access to iron.
