Rotating Equipment – Steam Turbines and Gas Compressors

WEIR ENGINEERING SERVICES offers the following services for clients' steam turbines and gas compressors:

- Workshop repair
- Manufacture of spare parts
- Field overhaul and shutdown management
- Upgrade and re-rating of plant

Workshop Repair:

Workshop repairs are carried out in our specialized regional facilities. Repair scope can range from standard overhaul on turbines through to the application of specialist component repair and rotor re-blading.

Manufacture of Spare Parts:

We can supply either OEM spare parts or WEIR parts engineered using our ADVANCED PARTS SOLUTIONS (APS) technology. APS can be used when the original manufactured parts are no longer available or the cost and lead-time is too high. WEIR APS provides a high quality spare parts service that will reduce through-life cost of your rotating equipment.

Field Overhaul:

We will minimize machine downtime when shutdowns are planned in advance with our project managers who can work with our clients' operations and maintenance staff to:

- Develop risk assessments
- Create detailed method statements and inspection criteria
- Quantify manpower needs to reduce downtime
- Review special tooling requirements
- Identify spare parts requirements and manufacture or source them in advance

Upgrade and Re-rate of Plant:

WEIR can offer long term solutions to customers to extend the operating life of their equipment. Our expertise covers a broad spectrum of turbomachinery design and analysis, including:

- Dynamic and structural engineers
- Aerodynamic and thermodynamic engineers
- Noise and vibration specialists
- Machine design engineers
- Material engineers
